May, he also taketh the artificial Fly, but he must be large, great wing'd, and a long Tail, resembling the Adderbolt or Dragon Fly, which he will also take, but you must use a Trowl, (as for the Pike) for being a strong Fish he will hazard your Line, except you give him length. His chiefest Season of biting is from May to August, at 9 in the Morning and 3 in the Afternoon, in a clear Water and when the Wind bloweth against the Stream. Its a wonderful sweet Fish, of extraordinary Nourishment, and a great Restorative in Consumptions.

SHAD.

2. The Shad. Alosa vulgaris. Alosa, Clupea vel Trissa Lat.

Names, Etymo-Chiepa Italis. Close Gallis at Bourdeux Coulac; Laccia at logy.

Rome, in Spain Saboga, and by the Dutch Meyvish: Its called by the Greeks Thrissa a tricon Capillus, because its Bones are small like Hair, or the Beardy Awns in Wheat and other Corn.

a Cubit long and 4 inches broad; between his Gllls and Backfin, it has 4 round black spots; its Scales are large, fall easily off, and are speckled about the edges with black.

D

bo

at

as

fu

pe

ge

These came from the Sea into the Seavern in March and April, fat and full of Spawn, but in the Month after, return lean and shorton.

Albertus affirms they are pleased with the tinkling of small Bells, and are allured into the Nets (especially in the Night) by tying them to their sides above Water, which Rondeletius also confirms, and if so, its an Argument Fishes can hear.

Baits & Food. They love red Worms of all forts, Wasps and Gentles; in their Guts Sea Fleas have been found.

Nature: Its a good Fish, but so full of Bones, that they are dangerously eaten without great Care; some assert their Meat is Hypnotick.

SMELT.

2. The Smelt. Eperlanus. Rolebein Germ. Spirinchus Schonfeld. Its called Viola from its Violet or sweet smell, and by us therefore a Smelt, and Eperlanus quasi Perlatus from its sine Pearly shining lustre.

They are trequently caught with Nets in the Thames above Place & Bair. Bridge, and are found in other great Rivers; they generally lie at the Tails of Vessels, and are angled for with a Gentle at

Memoirs for the Curious.

129 half Water, but the Bait which exceeds all others, is himfelf May cut into very small pieces, which will give you sport to admi- 1708, ration.

They are a fine light and easie digested Fish, and best in Nature.

Winter when full of Spawn.

4. The Sturgeon. Sturio. Some call this also Silurus, the STURGEON. Schwenckfield and Francius makes them two, others term it Names, Acipenser both in Latin and Greek. Esturgeon Gallis. Stoer Etimology. Germ. Sullo Hispan. Porcelletto Italis.

Sturio Julius Casar Scaliger affirms is a Gotbick word, and brought by them into other Parts of Europe, which Olaus Wormius also believes, because Stur or Steer signifies Large in the

Danish Language.

This Fish being rarely caught about London, I shall there-

fore give you a particular Description of it.

Its Body long and 5 square, with as many rows of pentangular Description. boney Scales; those on his Back rise highest, and are between 12 and 15 in number, reaching only to his Fin, the upper fide line runs quite to his Tail, and are about 30, the lower line has much the fame number with those on his Back; all these are white in the middle, and armed with strong crooked short Thorns: His Belly flat and smooth; his Snout broad, long, thin and pointed, with small Eyes in proportion to his Bulk, as is his Mouth, which is without Teeth or Jaws, whence its supposed he lives by sucking only: His Tail forked, the upper part much the larger and stronger.

The Fishermen in Silesia observe a greater and a less, one parieties.

with a blunt Snout, another with a sharp one.

They breed in the Sea, bur come for Refreshment into large Food, &c. Rivers about March; they are rarely or never taken with Hooks but in Nets, their Nourishment being Mud, Excrements, and perhaps slimy Animals like Snails, tho in their Entrails only froth and Gelly has been yet observed. Mr Rogers, Fishmonger, this day shew'd me one caught in the Trent, which weighed 130 pound, and was 7 foot and a half long.

his rarely eat fresh, but esteemed as a great dainty pickled, pickled which the Dutch and Germans do, cutting them into Fouls and Rands, Barrell'd up with Vinegar, Rhenish Wine, and Sea

Water, and so transport them to us in Caggs.

Memoirs for the Curious

May 1708.

Petrus Forestus in his 20th Book, Observation 12. commends the Bones of this Fish in a Rheumatism; its also said to dispel the Cholick.

Caver, how made.

Of its Rowes in Muscovy are made Caviare or Caveer, by freeing them from their Strings and washing with Wine or Vinegar, then spreading it on a Board to dry; after this they Salt it in a Vessel, mixing it well and mashing it only with their Hands: They then put it into a Stain or Far, with a hole at the bottom to let out its Moisture or Pickle, covering it very close and press it well down.

Its nourisbing.

This Gelly or foapy Mass is accounted very nourishing and a great Provocative, by increasing Seed and exciting Venery.

Sect. II.

Sect. II. Pisces Lacustres, viz. Fish as are only found in Lakes and Meers.

Welsh Oharr.

5. The Welch Charr. Charra Cambrobrittanica. This Fish in Wales they call Torgoch, which fignifies a red Belly which it has.

Mr Ray that great Naturalist took this to be the same with the next, and fince Mr Willughby in his Accurate History of Fishes, has given a short Description of this very Fish, with fome other particulars relating to it, I here briefly translate them, that fuch curious Persons who reside in those Paris; may oblige the Publick by cleering this doubt.

Description.

This Torgoch is of a Trout shape, has a brown Back, with 9 dark broad spaces on the sides, above the spotted line, with as many others of white between, every where sprinkled with dark yellow spots, the first Ribs of his Belly and Back-tail Fins are of a beautiful white.

Plase.

In Carnarvanshire its found in the following Lakes, viz. Lanberris, Llin-Umber, Festiniog, Bettus, and in another near Cassageddor in Merionethsbire, where they are smaller and earlier caught, viz. in October, and the rest the following Months, as November Dec. &c. fo that the 2d Lake fishing commences when the first leaves off:

A Bing.

They live in Shoals and are taken in Tramel Nets baited with proper Food and cast into the Water, where they leave them whole Days and Nights, for the Fish to come voluntary. in, which its faid they will only do at these Seasons, and not

in the Summer, tho they then repair to the Shallows, where they come to Breed, and are frequently feen basking on the Surface of the Lakes.

May 1708.

6. The Red Charr. Charra rubra. So called from the colour of its Belly at Winander Meer in Westmoreland, where every Winter they are plentifully taken: The Fishermen there suppose these to be the Female of the next, which there is little reason to believe, this being twice as big as it, and differs also in having its Flesh partly white, with pale speckles on its Back; whereas the other has red Flesh and black specks.

7. The Gelt or Gelt Charr. Charra alba. Supposedly so Gelt Charra alled from its Silvery gilt Sides and Belly; they are more esteemed then the last, and accounted the greater dainty; its said they frequently float on the top of the Water in the Sum-

mer Season.

8. The Guiniard. This is found in the Lake of Bala in Guiniad.

Merionethshire in Wales; as also in Hulls Water, a Lake 5

Miles from Pereib in Cumberland, where they call it the

Schelly.

It were to be wish'd, that any Persons skilled in the Know. N. B. ledge of Fishes, either in Wales or the adjacent Countries, would communicate what they know concerning these Lake-lishes or any others, either in their kivers or Sea Coasts, as are most particular or rare with them.

Sect. III. Pisces Fluviatiles laves. River-Fishes, and Sect. 3. such as live in standing Pools and Ponds of Water, as have no Scales.

9. The Bullhead, Cull, or Millers-thumb. Gobio Capitatus. Bull-head. Bot Cremonenfibus. Cop vel Kap Carinthijs. Grobbe Germ. Names. Gropp Helverijs. Keuling, Kulheit & Kaulheupt Saxonibus & Misenis. Mul alicubus. Tholimam Tridentinis.

It takes its Name from the largeness of its Head, which is Etymology.

very big, flat and broad.

In length it rarely exceeds 6 inches; his Mouth large and Description-tound, with small Filey Teeth; little Eyes with golden circles; a yellowish Back with 3 or 4 black rows; each Gil-sin has 3 bristley Nerves round and finely notcht, about the midst of his Belly he has 2 others, somewhat long, small and whitish,

with:

Memoirs for the Curious.

May 1703.

the Thi with 4 Nerves, the first largest, the 2d shorter; between his bolts or Vent and Tail is another Fin of 12 Veins, and 2 on his Back more the that next his Head shortest with 5 Nerves, generally blackin of about with a red Edge; another Fin of 17 Ribs, reaches almost to 10 a lon the Tail. At the opening of each Gill he has a crooked Thom you mu which turns upwards: His Tail round and finn'd, with 11 of ing ftro 12 branchy Ribs. The Female when ready to Spawn is vally them as big, and carries her Eggs in, 2 black Bags, resembling Dugs. and Eel.

Place, &C.

These are frequently found at the bottom of Pebley River, wish th where they commouly hide themselves under the Stones. They wine, are taken with Cadus's and other Water Infects, but his prin. Thei cipal Bait is small red Worms. Its affirmed by some that they certainly devour one the other.

Sel.

10. The Fel. Anguilla vulgaris. So called (ab Anguis similitudine) from its likeness to a Snake: It has been a great con- ness. troversy, whether the Generation of this Animal is Equivocal ressful or Univocal, and the rarely observed, yet the Learned Doctor The Charleton in his Exercitationes proves the last, and says, he is hots, fatisfy'd they are Viviparous by feveral Diffections he has made, Mill-d and that he once took 11 young ones out of the Females Belly, in Fou whose Head is less with a sharp Snout; the Males bigger with and o a flat one. They are faid to live 7 or 8 years, and out of Bai Water 5 or 6 Days; but not fo long with a South Wind as a North.

Fiviparous.

Brogling for

There are 2 ways of Fishing for Eels, proper and peculiar to that Fish alone, the first is termed by some Brogling for the re Eels, which is thus: Take a strong short Rod and a very strong Line, with a little compassed but strong Hook, which you must Bait with a well scoured Red-worm; then place the end of the Hook very flightly in the clift of a Stick, that it may eafily flip out. With this Stick and Hook thus baited, fearch for Holes under Stones, Timber, Roots or about Flood-gates; if there be a good Ecl, give her time and she will take it; but befure she hath gorged it, and then you may conclude, if your Tackling or Hold fail not, she is your own.

Bobbing for Eels.

The other way is called Bobbing for Eels, viz. Take the largest Girden Worms, scour them well, and with a Needle run a very strong Thread or Silk thro' them from end to end; take so many as that at last you may wrap them about a Board a dozen times at least, then tye them fast with the 2 ends of

Its F Cures 1 Piles,

A

A Letter of the Sieur Aymon, Minister of the Gospel, and Doctor of the Laws to Mr N. . . Professor of Divinity in the Protestant University of N. . . . giving some Account of the sinister Contrivances of the Popish Doctors, and other ill designing Men, to destroy the Reputation of the said Sieur Aymon, and to deprive him of Several Manuscripts of great Consequence, which are entrusted to his Care, in order to have them published in favour and for the use of the Protestant States and Churches.

THE Matter contained in the following Letter, has made I so much noise in the World, that 'tis believed the Curious will be glad to see what the Gentleman concerned therein bas to say in his Defence. We shall only add a particular not mentioned in this Letter, viz. That the French King has thought fit to bring an Action against Mr Aymon, and that the States General have given leave to one of their Subjects to all in this Affair as Attorney for his Most Christian Majesty. The Robbing of Libraries is so odious in itself, that a Crime of this Nature ought to find Protection no where: We do not know yet how the Suit has been decided; but this Gentleman fets fourth his Innocence in Such natural Colours, that 'tis highly probable that his Adversaries will produce nothing but Clamours wainst him. This Prosecution sheweth, how much the Roman Catholicks are concerned, that the Authentick Proof of their lorgeries and Prevarications should thus become Publick. We hope shortly to have an opportunity to give a further Account of this Affair.

S

Sir.

3 I R,

Am not much surprised to see the Papists to declare openly against me, because they look upon us as their profess'd Enemies: 'Tis their Interest to exclaim against us, and to use their utmost endeavours to stifle the designs of those that op. pose them; but I can't but stand amazed to observe, that some among the Protestants, who by the Maxims of their Religion, Conscience and Zeal for the Publick Good, ought to act with more Probity, should be so far prepostes'd by their faise infinuations, as to give a rash Judgment (and that in a matter of the greatest Moment) concerning certain Persons who bare a very honourable Character among the Protestant Churches. Sir, I have had feveral Letters fent to me upon that account, agreeing in the most material Points with what you were pleased to acquaint me, relating to the Rumour spread abroad in certain places of these Provinces, fince a late Advertisement published in the Journal of the Common-wealth of Letters in June last, intimating, that certain Papists entertain a shrew'd suspicion, that a Gentleman lately gone from Paris into Holland, had furreptiously taken along with him from thence several Manuscripts of great Moment.

The Author of this Journal has afted with so much circum-spection, as not to give a particular Charafter of the Person thus suspected; but rather, as I am inform'd from good hands, has refrained from inserting what seem'd to be most resteding in that Letter sent from France, out of which he published that Article. Nevertheless, at the Request of divers of your Friends, and because it so happened, that I had occasion to take a Journey to Paris the last Year, I intend to make certain Overtures to you upon this Head, which you may communicate to your Friends, to remove those similar Impressions which may have been imposed upon the World by the Calum-

nies of our Adversaries and Enemies.

I can't guess at the reason why you would not quote that Article out of the Common-wealth of Letters, inserted Page 691. which runs thus: The last Council held by the Greeks at Jerusalem, was taken here (at Paris) out of the King's Library; 'tis a Folio neatly bound in red Turkey Leather and mark'd with the Signet of the Royal Library; 'Tis supposed

that the lieved not be ends, wheen j

fcript being they v fenfib to lig 'li

Pari.

May 1708,

that this Manuscript was carried off into Holland, and 'tis beheved also that this was not the only one; but hitherto we have
not been able to discover the Authors of it. Sir, here this Article
ends, without saying one word of that pretended Abjuration I have
heen falsely charged with in your Parts, ever fince it has been
publickly known that I had in my possession certain Manuscripts, the loss whereof is much regretted by the Papists,
being apprehensive (and that not without great reason) that
they will be produced against them, for they are sufficiently
sensible of the disadvantage they are exposed to, if they come
to light.

Is upon this score, Sir, that I can't much wonder that our Adversaries have endeavoured visibly to blacken my Reputation, since they could not be ignorant, that ever since my return out of France, I have laboured with more Assiduity than ever, to combat their Religion, by the help of certain Manuscripts of great Consequence, which have been put into my Hands by certain unknown Persons, as will appear more evi-

dently by the sequel of this Letter.

In the mean while, Sir, I defire you to take notice of the gross and ill contrived Calumnies that have been spread Abroad in these Provinces against my Ministry. If you will be pleased seriously to reflect upon the circumstances they have mnex'd to them, you will find them so frivolous, that they ought not to make the least Impression even upon the worst of my Enemies. The falfity thereof is so palpable, that I dare promise my self, that all true Protestants as well as others, who found their Judgments upon the Maxims of Christianity, Prudence and Wisdom, will not be inveighted by such like Calumnies: For let a Man's Eyes be never so much blinded by the Malice and Prejudice of the Age, I am certain that as long as true Reason has the least place left in this World, no body can be so far beyond his right Wits as to imagine that I could officiate in the Romish Church at Paris, and offer up Inomses to their Idois, in sight of a Million of People, and that me the least advice thereof should be fent into these Provinces, till 7 or 8 Months after I had left France; and that only by one fingle private Letter, the Author of which durst not so much as insert this fabulous story of my Abjuration in the Paris Gazette, which would have proved a piece of comfor1708.

Memoirs for the Curious

table News to the Papists, but that the Contriver thereof was sufficiently sensible, that he would scarce meet with so credulous a fort of People among our Enemies in France, as he has found here in our Country among those of our Communion.

I think, Sir, this fatal Blindness of those that suffer them. selves to be led away by such ill grounded Prejudices, may ferve as an undeniable Instance, that even the worst of Calumnies may, by ill defigning Persons, be usher'd into the World under the Disguise of some appearance of Truth. 'Tis upon this account, Sir, I intend to represent to you what I believe will be sufficient to justify me in the Opinion of every body, which may instruct some and stop the Mouths of the Enemies of our Religion, and of those that spread their Calumnies against me: And this I propose to do, Sir, in a sew words, fince it will prove no difficult task for me, to convince all Persons of Equity and sound Judgments, that these Accusations of the Papists are nothing else but the Inventions of the most malicious of their Party, especially what they would fain impose upon the World concerning my having fent out of France into this Country several Manuscripts, and

among the rest the Council of Ferusalem.

For it is absolutely false, that this Greek Council was taken out of the King's Library, during my stay at Paris; and it is as false that it was ever mark'd with the King's Signet. There are several Persons who have feen it in Holland, and can witness the contrary of what is afferted by these Calumners; and fuch as are defirous to take a view of it in a certain Place of fafety, where it is kept at this time, may be convinc'd of the Truth of what I fay; for they will find upon it 3 Signers, or Seals quite different from that of the French King. One is that of the Stamp'd Paper of the Emperor of the East, who is commonly known among us under the Title of the Grand Signior of the Turks; the second, that of the Patriorch of Ferusalem; and the third that of Mr Nointel, the French Ambassador, who resided in the Ottoman Court in the Year 1672. and who fent these Decrees of this Council thus author rised to Mr Arnaud, Dr. of the Serbonne, to make use of them against us: But this Doctor did not think fit to publish them in his Treatise of the Perpetuity of Faith, without consealing things that are extant in the Original, by which it will

spear, that our Adversaries of the Church of Rome have fallify'd some of the Attestations of the Greeks, published in their fleces of Controversies, and that the rest contain nothing that deserves any credit. Sir, the Proofs I have by me are so Authentick, that I think nothing can go beyond it, to convince the World, that the most celebrated among the Popish Dostors make not the least scruple to corrupt all manner of Authentick Asts and Records, to the Destruction of Truth and our Religion, to establish their Erroneous Dostrine, and maintain the Abuses of their Idolatrous Superstitions.

It is also most evident, Sir, that this Council of Ferufalem was never among those Manuscripts that are commonly shewn or feen in the French King's Library, because all the Attestations which the King has caused to be brought out of the Best relating to this Grand Controversie of Transubstantiation. which has made so great a noise, and continues to do so still, have been delivered to the Doctors of the Serbonne, and some other Divines, who have deposited them in certain private Glosers; and are never shewn there, except to Persons of known Merits and Learning, and fuch as have a particular Inwrest to inspect and examine these Manuscripts. Tis for this reason they are not distinguish'd by any particular Signet or Mark, as it is commonly practifed in Publick Libraries; for they are never intrusted with any body, but who takes such a peculiar Care and Charge of them, that it is impossible they should be convey'd away, without the consent of those that keep the Keys.

There is not a Man of Letters, that has been in the French king's Library at Paris, but what knows and can attest it by experience, that if any Man has so much Interest as to be admitted into the private Closet of this Library, to take a view of the Curiosities and Rarities which are kept under the Key in particular Repositories, that no body is less there alone by himself, so much as for one Minute. Now if it be considered on the other hand, that this before-mentioned Council is a large Manuscript in Folio, bound up in so strong and firm a Covert, that it can't be bent or roll'd together, and consequently not be carry'd away without being discovered, 'tis evident beyond all contradiction, that it is next to an impossibility, that a Minister, a New Convert, over whom, as over a Person that

lies under a great suspicion, the Papists keep a continual watch ful Eye, and one who comes from an Enemy's Country into the Secret Closet of the Royal Library, should be capable of conveying thence a large Volume, without being perceived by those that watch and observe every Step he makes, and by the

Swifs that keep the Guard at the Doors.

How can it possibly be supposed after all this, that a Minister banished out of France on account of his Religion, and a Profelite, (fuch a one as I was) who had left the Communion of the Romish Church, should make his Application to the King's Library Keeper, to tell him, that having made's Solemn and Publick Abjuration of the Protestant Religion, before the Cardinal de Noailles, Archbishop of Paris, and given notice thereof to the Clergy of France, he ought to admit me to the fight of certain Originals of the Confessions of Faith of the Greeks, which had been purchased from them by the Ambassadors of France, to palliate the Errors and Abuses of the Church of Rome. One must suppose the French King's Library Keeper not to have been in his right Wits, if he had entrusted me with those Pieces which discover the Frauds of the Popish Doctors, such as they trump up against the Prote-Itant Churches.

I think this is more than sufficient to convince the World of the falfity of what has been laid to my Charge, viz. to have conveyed away out of the King's Library the Council of Ferusalem, and some other Manuscripts which are of great Advantage to our Cause. Those who challenge these Pieces as their own, ought rather to say, (if they will lay the Sadle upon the right Horse) that there are certain Doctors of the Popish Church, who being entrusted with them, and convinc'd of the Frauds and ill Practifes of their Brethren, endeavour underhand the Establishment of the Truths of our Holy Religion; and feeing 'twas not in their Power to publish these Manuscripts, which were in their Hands, and so advantageous to us, some among them took care to have them conveyed into our Hands, that so we might make the best use of them, without exposing them to the danger of a Persecution, who, tho they are willing enough to encourage our Caufe, do nevertheless think it not seasonable as yet to declare openly against Anti-Christ. From all which we may draw this undeniable

Memoirs for the Curious

Consequence, that the Papists can't accuse me without Injustice, and our People not without the highest degree of Ingratitude; for having in concert with some certain Nicodemites of the Romish Church, carried off in time of War, and pursuant to our Commission out of the Enemies Camp, so considerable a Spoil, and of the Pains I am daily taking to make the best Advantage of it, for the edifying of our Churches, and supporting by new and indisputable Proofs, the most important and weighty Apologies of our Holy Religion.

As to what relates to that pretended Abjuration wherewith the Papists would fain charge me, if they could, I am not obfiged, according to the Rules of the Law, to make the least defence against what they alledge, without any judicial Proof: and I defire them to produce any that can be look'd upon as valuable, either within or without any Court of Judicature: Nevertheless, if any of them should have a design to rouble the World with some of their malicious Suggestions in Print, or otherwise: I am very willing you should acquaint all fuch as are likely to engage in fuch a Project, that I am, thanks to God, sufficiently provided with what will confound their malicious Endeavous, if they have Impudence enough to trump up fuch an Accusation against me. And 'tis for this reason, Sir, that I am ready to intimate to you some few of these Proofs, wherewith I can easily deltroy these Calumnies of my Adversaries; besides which, I keep in reserve many where more confiderable, and fufficient to convince even the moll incredulous, if there should be occasion to make use of them for my further Justification: For, I think it would be a piece of Imprudence in me, to lay open all my Batteries at once, which I have raised on purpose to level the Works of the Enemies of our Religion and of my Reputation, if they are bold as to come within reach of them.

lam very willing therefore, Sir, to acquaint you, that I did not go out of this Country without the knowledge of their High Mightinesses the States General, who not only ganted me a Pass, but also their Letters of Recommendation and Protection, as far as to the Grand Signior's Dominions, if Ishould have occasion to go so far. Besides this, I was provided with two other Passes, one being Sign'd by the French Ling's Intendant, then reliding at Brussels, and Counter-signed by

May 1708. May 1708.

by the Governors of all the Places of Strength thro' which I pass'd in my way from Holland to Paris, without the leaf mention made in them of that pretended Abjuration, which has made fuch a noise fince; on the contrary, my Name, Cha. racter and Quality is express'd in it, without the least Ambiguity or Disguise. The other Pass is sign'd by the French King's own hand, and Counter-figned by his Chief Minister of State. In this Pass free leave is given me to go out of the King's Dominions, and that in the same Qualifications and Character I bore when I came into them. And to convince you that I did not travel incognito, the Governors of Senlis and Lille did not only examine my Pass and took notice of my being a Minister, but also the Governor of Newport entertain'd me very honorably the last Night when I was just leaving the French Territories, in company of a certain Brigadier of the French King's Horse-Guards, who happened to be an intimate Friend of the Governors. This Brigadeer's Name was Pikel, who being a Prisoner of War in Holland, had been in France upon his Parole, and went along with me the next Morning from Newport to Oftend, and kept me company till we came into these Provinces; where he has declared to several Persons, that all the way I travell'd in his company from Paris to Amsterdam, he called me always by the Name of a Minister; and that I had my Name entred under the same Qualification in the Books where the Coaches lye, and in all the Custom house Offices from Paris to the utmost Confines of the French Territories. My Name, Sirname, and the Quality of my being a Minister, is also to be found in the Register of Strangers at Mr d' Argensens, Lieutenant General of the Police of the City of Paris.

If all this were not more than sufficient, I could alledge in my behalf the Evidence and Testimomy of many Persons of Note in Paris, who used to Eat with me; of several Bishops, many Abbots, and other Ecclesiasticks, who used frequently to Converse with me, sometimes in private, sometimes in the publick Walks at Paris. Or if you put more considence in their Philosophers and Mathematicians, I need only direct you to the Inn at the Sign of the Crowned Faith in Richlieussians, I am sure there are abundance of Men of Merit and Letters who resort thither daily, who, I dare say, will be

in a Protestant Ministers Dress; and that I was so far from disguising my Religion, that on the contrary they have heard me frequently speak as vigorously against the Abuses of the Church of Rome, as if I had been preaching or maintaining a controverted Point in a free Country, and in an Assembly of Protestants.

Besides these Testimonies of my Conversation in Publick, same able to produce others (if it be requisite) of what I have done in private with many of the Protestants, that are still conceased in Paris. I never lest off to strengthen their Faith by my daily Exhortations, till the very last Night before my Departure, and surnished them with a good number of Pieces, which I had published before, against the Church of Rome, and convey'd them into France by the same means I sent away from thence 3 or 4 Trunks sull of Manuscripts, in spite of all the Vigilance of those that search without exception, every thing that is either imported into, or exported,

out of the Kingdom.

After all this, Sir, I leave it to your Judgment, whether I ought to be in the least disturbed at these faise Rumours that have been raised against my Reputation and my Ministry, under the imposture of a pretended Abjuration: For, as to what concerns the Manuscripts, they fay I have conveyed out of Fronce, I have told you already, and can prove it more plainly. if there be occasion, that they are much militaken if they believe that it was possible for me to have got them into my Poslession, without the assistance of certain Persons of great Repute in the Church of Rome, who have entrusted me with them of their own accord, because they are secretly in their Hearts favourably disposed, and framing very advantageous Designs for our Hely Religion. Sir, I can give you immediate and convincing Proofs of it, if you will take the Pains to take a view of the Manuscripts which are entrusted with me, and which I keep in places of fafety in these Provinces, to make use of them, according to the good Intentions of those who put them into my Hands.

The most considerable of these Manuscripts, as well Originals as Copies, I have got at Rome and in Italy, where I my self have spent 5 or 6 Years in comparing divers Pieces of

great

1708.

Memoirs for the Curious.

great Moment. I have also at my proper charge, employed divers Transcribers in several Libraries of Europe, and among the rest that of the Escurial in Spain, and I have also met with some Friends, who have likewise entrusted me with divers other Pieces, taken out of the most secret Records of the Jesuis, I have by me 2 large Volumes in Folio, written by a certain Fesuit, a Mandarin, with his own hand, which positively contradict all that Father le Comte has told us concerning the Divinity, Philosophy, Policy and Rites of the Chinese, which has made fo great a noise in Christendom, and is still the subjest of no small Contests in the Court of Rome. I have, Sir. of late bestowed abundance of time in uncpyhring many rare Manuscripts and most curious Letters, relating to the Council of Trent. The main Intrigues and underhand Defigns of which have not been discovered to the World, either by Paelo or any of the other Historians, as I shall have occasion to shew in feveral Pieces of Consequence as soon as possibly I can be at leifure to put 'em to the Press. For, youmust know, that some of my most intimate Friends, have prevailed with me to lay aside for a few Months that Piece, and to publish without any further delay the Council of the Greeks at Jerusalem, together with some other Tracts relating to the Eastern Church, by which it will most manifestly appear, that the Doctors of the Sorbonne, who fet the famous Mr Arnauld at work upon this subject, in opposition to our most able Divines, and Mr Clainde of happy Memory, Minister of the Protestant Church of Claude in particular, have not acted like Men of Faith and Honour. 'Tis known to all the World, that they entred upon a Refutation of the Works of this Minister, by a numerous Collection of Attestations, which the Clergy and the Ambassadors of France had found means to get together in the East, where they met with certain mercenary Patriarchs, Bishops, and other Ecclefiasticks among the Greeks, who forg'd fuch Confessions of Faith as were thought most proper to contradict the Opinions of our Ministers relating to certain Points in question, wherein our Church is put either upon the same Level, or in opposition to that of the Greeks, which never adher'd to the Tenets of the Latin Church; fo that it proved a thing impossible for our Divines to unfold this Riddle; and to shew as evidently as I am able to do, what 's real and

what is suppositious, and among that great Collection of Formulars of Doctrine, which has been so long controverted betwirt us.

You know, Sir, that we caused a certain Confession of faith to be printed at Geneva under the Title of the Faith of the Eastern Church, to shew the World, that the Greeks, who are independent on the Church of Rome, agree with us in Opinion. The Doctors of the Popish Church have had recourse to Forgeries, to invalidate this Confession of Faith, and the Greeks assembled at the last Council of Ferusalem, under their Patriarch Dositheus, have not only discovered it, but positively asserted, that Cyril Lucar, the Patriarch of Constantinople, never was of the same Opinion, as it is express'd in that Confession of Faith, Printed at Geneva under his Name; and with which they say, we falsy tax all their Churches,

the quite contrary to their true Sentiments.

This is doubtless one of the most weighty Controverfies we ever were engaged in with the Church of Rome and the Greeks at the same time. They represent us as a Society of Impostors to the Christian Eastern Churches, as well as to those of the Popish Communion, since we drop'd that Controverly, upon their producing against us the Council of Ferusalem, which the Patriarch Dositheus delivered in Person to the French Ambassador at Constantinople in 1672. after he had been forced to leave Ferusalem. This Ambassador fail'd not to transmit it to the Doctors of the Sorbonne, and these to Mr Arnaud, who took care to have it translated by a Religious Person of the Congregation of St Maur: It was afterwards committed to the Custody of the Benedictins of that Convent, till a certain Person of this Society, touch'd with a temorfe of Conscience at the Impostures of the Papists and Greeks, resolved to put it into my Hands, which he did, upon my promise not to mention his Name, whenever I should publish this Work; together with some others relating to the ame Controversy. Sir, I can help you to the fight of the Original of this Council before long, the I can't do it just at this time, because I have sent it a few Days since to some of my friends who are not at the Hague, to take their advice concerningcertain Difficulties that occurr'd in the Translation. In the mean while, I defire you would communicate to me your real Sen146

May 1708. Sentiment of the Memorial which I fend to you, concerning what Judgment ought to be made of the Patriarch Lucar, and his Confession of Faith, without any regard to these different Relations that have been given of it, because we are now obliged to produce nothing but Authentick Proofs, to put an end to this Question, and not to insist upon Conjectures or Probabilities, which hitherto have served only to increase the Difpute. I am in hopes, Sir, that the reading of this small Me morial will not be disagreeable to you, and that you will meet there with reasons sufficient to convince you, that this Patriarch has most justly deserved what he has acquired both among the Greeks and Protestants; fince he has suffered such heavy Persecutions at Constantinople, for no other reason than his having maintain'd publickly our Doctrine, in conjunction with the Heads of the Clergy that depended on his Jurisdicti. on. You will also see in what manner he was protected by the Ambassidors of the States General, who, prompt'd by a holy Zeal for the Advancement of the Reign of Fesus Christ, at his Request sent into that Country for a great many Books, fuch as were thought most proper to engage both the Greeks and Mahometans to embrace our Religion.

The Court of Rome was so allarm'd thereat, that they set all their Engines at Work, to have this Patriarch deposed, which they effected so far, that he was degraded three several times, but as often found means to be restored to his Dignity; till at last the Pope engaged the fesuits to act against him, who having a College at Constantinople, he surnished them with Money, to bring over the Great Men of the Ottoman Court into their Interest, who sacrific'd this Patriarch to the sury of his

Enemies.

You may judge now, Sir, how many intricate Questions I am likely to meet with in my way, in order to set this matter in its true light, and to make an Apology for what some of our Ministers have asserted, concerning the Religion of the Greeks, who had no Dependency on the Latin Church, without being able to support their assertions with such Authentick Proofs, as were sufficient to stop the Mouths of our Adversaries. I have all the reason in the World to hope, that what I shall have occasion to alledge on account of this Council of Ferusalem, will be convincing enough to put them all into

I expect no less than to see their rage encrease against me, in proportion as they find me to prove successful in my design of engaging against them: I don't in the least doubt, but that they will redouble their Impoltures to put a blemish upon my Works; nay, that they will not be sparing either of Daggers r Poison, to encompass my Destruction, if it be possible: They will not fail to fend their Emissaries into these Provinces. wkeep a watchful Eye over all my Motions, and to lay their snares on all fides. I was told a few days ago, that they had laid a Project for a Profecution against me, under pretence: that this Council of Ferufalem was stol'n out of the King's. Library; and no doubt but thefe false pretences wherewith they intend to give a fair Colour to their Demands, tend to mies than to deprive me of these Manuscripts, as well as of feveral others, cost what it will: For they have dispatch'd Procuration to the Hague, to form my Process upon that Account. I can't tell as yet whether there will be found among us fome Men, who will be fo ill advis'd, or simple, as to engage in it; but this I am fure of, that I am in a condition make them repent of their refiness, if they dare attempt a Information of this Nature. I can further assure you, that all these malicious Designs of the Papists and their Adherents, lon't trouble me half so much, as it does to see some of our Brethren so forward to give ear to the Calumnies of our most mel Enemies, and to proceed to that degree of Impudence and Ingratitude, as to joyn with my Adversaries against me, whilft I am labouring, with the hazard of my Life, to publish those things, which not only will prove very serviceable to their Reputation and Advantage, but also to the Establishment of that Religion, which they confess in all outward appearance. s well as we do. Sir, The ill Conduct and Behaviour of these Men, is so prejudicial both to the Interest of our Church and the Good of the Common-wealth, that I can't but stand amazed to see our selves so far destitute of a True Zeal for. the Advancement of the Reign of Fesus Christ, as to suffer that our New Converts should be thus subject to the unjust ferfecutions and Oppressions of the Papists; and that there inould May

1708.

Memoirs for the Curious.

should not be wanting among those of our Communion, such as will lend them a helping hand, whereas there are scarce any to be met with, who will maintain their Cause and encourage them in their Sufferings. Can any thing be more strange, or more remote from the True Maxims of Christianity?

As for my felf, Sir, I have had the good fortune to meet with certain Persons of a considerable Merit in all Places wherever I came, who have favour'd me with their powerful Protection; and I am very ready to own, that next to the Assistance of God Almighty, I must put you among those that have given me the most solid Consolations to allay the Bitterness of my Life; and 'tis for that reason I think my self the more obliged to wish, that it may be in my Power to be in any wise subservient to the Pious Designs of your Apostolick Zeal, under the auspicious Protection of the most Potent Sovereigns of this most flourishing State; and to testify, that I am with all possible acknowledgment and respect

Sir,

At the Hague, Sept. 2d. 1707.

Your most Humble and most Obedient Servant,

J. Aymon, Minister.

The Piece above inserted is so curious, so surprising, and contains so sincere an Account of a Matter wherein the Interest of the Reformed Religion is concern'd in the highest Manner, that the Gentlemen concern'd in this Miscellany think themselves happy in having the opportunity of publishing so valuable a Trast of this nice Nature to the World, and attesting their high Regard for that Ingenious, Learned and Pious Refugee the Author of it. The unmerited Aspersions which the Enemies of our purer Faith have thrown upon his Character, the Arts they have used to blacken his Reputation, and the Methods they have contrived to extinguish his surviving Labours, augment his Fame, which encreases by opposition, and darts its Shining Beams thro' all the revenge of Hell and the Popish Faction. 'Tis true, he Suffers for his Zeal, and so did the first Fathers of our Church; like them he suffers, whilst surrounded with Prosecutions, he protests our Religion from the Superstitious Idolatries of an Ignorant or Bigotted Clergy.

A Continuation of the several Antiquities, supposed to be buried by the Romans; also of the most Remarkable Structures, Rarities, &c. in the City of London.

THE first that Mr Inigo Jones undertookwas the Banquetting-House, in 1607 in King James the I. Days, at the charge of the States of Holland, (as it is reported) upon his delivering some Cautionary Towns into their Hands. Sir Peter Paul Rubens did the Painting on the Ceiling, which they also paid for. This Pompous building by him designed for the Entertainment of Ambassadors, so extreamly pleased his Majesty, that he was contented with it alone, altho' at first it was design'd to Build another like it on the other side, with aspacious Arch or Gateway between them.

King Charles the I. design'd to make it one of the finest Palaces in Europe, the Draught whereof I have seen done by

lingo Fones, and Webb, his Son in Law. The next fine piece was the Church of St Pauls Covent: Garden, and the Piazza, the Ceiling Piece in Prospective done by an Englishman, living in the said Parish, and Father to the late Ingenious Carver and Architect, Mr - Pierce, who Built St Clements Church. The next he Built was Queenfreet, design'd at first for a Square. (said to be at the charge: of the Society of the Jesuits) This I take to be the first Magnificent Street, the Houses are Spacious and Uniform; on the other side next little Queen-street, they began after the same manner, with 3 Flower de Luces on the Wall, but went no These and Covent Garden were the design of the Earl of Arundel, who first brought building with Brick into vie, (I mean private Houses) for St James's, Hampton Court, and Bridewell, were built of Brick long before, and there were 10 such Houses in London before 1603. His Lordship first brought

May 1708. brought Balconies into use, and fisst in Covent Garden, and at the corner of Chandois-street was the Sign of the Balcon, which Country People used much to stare at. I have seen at St James's and Whitehall fine twifted Work admirable perform. ed in Chimneys in several Forms and Figures, all different This Jones was Architect to the Farl of Bedford, and built that part that was a Terras Walk, and two Banquetting Houses at each end.

The Chapel in Somerfet House that fronts the Thames, was built by him or Mr Web, by which I am not certain, also the Water-gate; likewise the Chapel at St James's for the use of Maria de Medice, a very noble Structure. In Lincolns-Inn Fields he erected an House for the Marquis of Winchester, now inhabited by the Earl of Linsey. This was the next Square after Covent Garden, in and about London, afterwards were Lincolns-Inn Fields, St James's, Bloomsbury, Leicester-Fields, Soho, Golden Square, &c.

The next he built was Goldsmith's Hall in Foster-lane, in 16. all of Brick, and admirably contriv'd, confidering the Ground it stood on. The outside endured the dreadful Fire in 1666, tho the infide was confumed, yet the Walls ferved again, which shew'd the Judgment of the Architects; the Vauls are the belt that I ever faw.

But his admirable Art was shewn in building the Portico at the West end of St Pauls Cathedral, so admired by judicious Travellers, and it is rare to meet with any of those Cuts in Sir William Dugdale of the West, East, North and South views defigned by him.

Something he defign'd for the Cathedral Church at Winchester, and the Water-gate at York House in the Strand. He was complained of to the Parliament in 165. by the Parishioners of St Gregories near St Pauls, for threatning to pull down their Church.

He left a great and curious Collection of Drawings and Defigns, and noble Books of Architecture, which fell into the Hands of Mr Oliver, and are fince dispersed. He wrote a History of Stonebenge, which Mr Web publish'd, with his Vindication against Dr. Charleton, and in it a short Account of He afferts that it was a Roman Building, and Dr. Charleton that it was Danish: Web vindicates him against

the Doctor, and tells us of several Roman Vessels that were dug up there, and that Sir Tho. Eliot in his Dictionary mentions a piece of Lead that was dug up at that place, with an Inscription on it that all the learned Men in the Nation could make nothing of; but I confess my self of the Opinion of Mr John Aubery, who at the Command of King Charles the II. wrote a Tract of the Antiquity of Stonehenge, Long Compton and Auberg, where are Stones of like Form, and it is his Judgment that they were crected before the Romans knew the Island of Great Britain. and that there were Temples in which the Druids Worship'd, which contradicts all that wrote before. I could wish the MSS. were printed, it is now in the hands of Mr Ansham Churchil. It feems to me that altho Cafar makes the Britains mde and unpolished, yet that the old Phenicians trading with them so long for their Tin, must leave some of their Arts behind them, and why not Building? Sure I am, that when King Charles the II. met Mr Aubery at Stonehenge at his reum from the Bath, was well satisfy'd with his Observations and Notions, and promis'd him Encouragement.

Mr Inigo Jones also built the Chapel in Lincolns. Inn on Inches after the Gotbick manner, like St Stephens at Westminser, now the House of Commons, (a building much to be admird) with a Cloyster thereunto belonging, built by King Henry VII. Jones took his Model from hence. The Glass Windows are admirably design'd and curiously colour'd; done by Mt Hall a Painter in Glass, who formerly lived in Fetter-lane; and in Lincoln College Chapel in Oxford are such Windows. Iam not certain whether he built the Middle Temple Hall, not can determine whether he had any hand in that Church of St Giles's in the Fields, and Tennet House in Aldersgate-street; what other Publick Building he hath done I have not met with, but refer the Reader to the Vindication of Stone-lange, writ by his Son in Law Mr Web, wherein he had wrote

his Life.

The Extraordinary Structure of the Heart of a Human Fœtus.

S most things that are curious or fingular in their A Nature, are communicated to the Academy, Mr. Chenrineau, Doctor of Physick, brought thither the Heart of a Human Fætus, which he had dissected, and discovered in its Structure, (which was very peculiar) something that had a near relation to the point in question, among our Modern Phyfitians, concerning the Oval hole This Heart had three Ventricles, which had a Communication with one another, in the same manner as we see it in that of a Tortoise. The Right Ventricle received, as is usually observed, the Vena cava, but not the Pulmonary Artery; and the Left Ventricle received the Pulmonary Vein, but not the Aorta, these two Vessels. viz. Pulmonary Artery and the Aorta being inserted within the third Supernumerary Ventricle. Their Openings were fo disposed, that the Blood which from the Right Ventricle was carried into the third, was convey'd thence into the Artery of the Lungs, and that the Blood, which was carried into the same third Ventricle from the Left Ventricle, took its courfe into the Aorta. There was no Canal or Passage of Communication betwixt the Pulmonary Artery and the lower Aorta. This Artery of the Lungs was very small when it came out of the third Ventricle, and afterwards was divided into two Branches, the Diameter of each of which was as big again as that of the Trunck, which seem'd to intimate, that the Blood, which from the Heart was carried into the Lungs, not finding a Passage there, stopt in these Vessels and produced this Dilatation. The Diameter of the Aorta was as big again as that of the Pulmonary Artery. These Observations appear'd to be contrary to the Opinion of Mr Mery, but notice ought to be taken on the other hand, that the Structure of this Heart

Memoirs for the Curious.

Heart was actually Monstrous. The Child had been living. and it was not in this cafe as it is with all others, in which there happens an alteration in the Heart after they are born. when the Blood alters its Course. For in this the Commu. meation that was betwixt the three Ventricles, could not be subject to any alteration, because it was absolutely necessary. that the Blood as well of the Right as of the Left Ventricle. should be convey'd into the third, to meet the Arteries there. The whole Difference confilts in this, that after the Birth of the Infant, the Blood would have made its Passage more freely and in much greater quantity thro' the Lungs, and the Pulmonury Artery would have had its equal share with the Aorta; but this Child, even tho it had come to be a Man, would net witheless have been no more than a Hetus in respect of its being in a condition to live without Respiration: For fince it was impossible for the Blood to penetrate thro' the Lungs, it must of necessity have been carried into its old Channel of the dorta: so that to the surprize of all the World, we should have seen a kind of amphibious Man, like a Tortoise; and if it had fo happened, that fome body or other among our Phyfinans had had fo much Sagacity, as to guess at the Existency of these three Ventricles and their Communication, 'tis more than probable that his Supposition would scarce have met with my credit among the reft.

Upon Anatomical Injections.

'Tis to be observed, that those Vessels which convey the blood and other fuices thro' the Body, are most strangely entangled and complicated within one another, by their vast numbers and multiplicity, which is almost infinite in the very smallest part of any Creature, sometimes they are hidden from our sight, either because they are so exceeding small, or else because they fold and cling together, after the Creature ceases to live. 'Tis this that has engaged our Modern Anatomists to contrive certain Injections of such Liquors, as being once convey d into these Channels, are carried forward to the very extremities of their least Branches, that so by extending their Tuniques, they may become sensible Objects of our sight, and that in their Natural and Primitive Shape. But after all these

these Injections are subject to no small difficulties, unless they are prepared of fuch Liquors as flow thro' these Vessels with an casie Course, without burning the Vessels thro' their heat in their Passage, and such, as being once cooled and coagulated, will remain there without breaking the Vessels. A great deal of care must also be taken to prevent the Inconveniencies arifing from the Air, which being enclosed within the Vessels, and suddenly dilated by the heat of the injected Liquids, either breaks these small Tubuli or Channels, or at least prevents the injection form penetrating thro' all the innermost Recesses and Passages. Mr. Homberg reflecting upon these Inconveniences, has contrived a way to prevent them by a certain Metal. lick mixture, not subject to the same difficulties as the com. mon Injections are, as also by a certain Machine of a new Invention to void the Air, the better to promote the effects of his Anatomical Injections: For it is of no small advantage in a thousand Occasions, to have the absolute Government of the quantity of the Air, according as less or more of it is requir'd in certain Operations, and the Invention of this Secret is none of the most inconsiderable among many others that our Modern Physitians glory in. .
